

The Tech Industry in California and Los Angeles

William Yu
Economist, UCLA Anderson Forecast
September 2018

The tech industry is doing very well these days in the U.S. Over the past eight years, while the S&P 500 stock index has increased by 154%, the NASDAQ index, which consists of about 50% of tech companies, has increased by 275%. Many of the most valuable companies are tech companies, such as Apple, Amazon, Google, or Facebook. Tech

employees are compensated nicely due to this tech boom. For example, in 2017, while the annual median wage for all occupations was \$37,700 in the U.S., it was \$84,600 for the computer occupations, second only to \$102,600 of the management occupations as shown in Table 1.

Table 1 2017 Median and Mean Wages and Employment in Major Occupations in the U.S.

Code	Title	Median wage (\$)	Mean Wage (\$)	Employment
11-0000	Management Occupations	102,590	119,910	7,280,330
15-0000	Computer and Mathematical Occupations	84,560	89,810	4,261,460
23-0000	Legal Occupations	80,080	107,370	1,095,770
17-0000	Architecture and Engineering Occupations	79,180	86,190	2,516,780
13-0000	Business and Financial Operations Occupations	67,710	76,330	7,472,750
29-0000	Healthcare Practitioners and Technical Occupations	64,770	80,760	8,506,740
19-0000	Life, Physical, and Social Science Occupations	64,510	74,370	1,148,300
25-0000	Education, Training, and Library Occupations	48,740	55,470	8,727,710
27-0000	Arts, Design, Entertainment, Sports, and Media Occupations	48,230	58,950	1,925,140
47-0000	Construction and Extraction Occupations	44,730	49,930	5,728,460
49-0000	Installation, Maintenance, and Repair Occupations	44,520	47,870	5,528,390
21-0000	Community and Social Service Occupations	43,840	48,050	2,096,740
33-0000	Protective Service Occupations	39,550	47,190	3,408,680
43-0000	Office and Administrative Support Occupations	34,740	37,950	21,965,480
51-0000	Production Occupations	33,990	38,070	9,024,560
53-0000	Transportation and Material Moving Occupations	31,600	37,070	9,978,390
31-0000	Healthcare Support Occupations	28,710	31,310	4,113,410
41-0000	Sales and Related Occupations	27,020	40,680	14,522,580
37-0000	Building and Grounds Cleaning and Maintenance Occupations	25,620	28,930	4,424,440
45-0000	Farming, Fishing, and Forestry Occupations	24,390	28,840	470,920
39-0000	Personal Care and Service Occupations	23,610	27,270	5,159,100
35-0000	Food Preparation and Serving Related Occupations	21,910	24,710	13,193,090
00-0000	All Occupations	37,690	50,620	142,549,250

The Tech Industry and Employment in Six California Regions

California is the center of high-tech and innovation in the world. Let's take a closer look at how well the tech industry and tech employment are doing in its six major metro regions. Note that there is no strict definition of a high-tech firm. To simplify the analysis, we use two ways to examine the growth of the tech industry for the six regions. We use the major industry categories defined by NAICS (North American Industry Classification System) as the first method. We assume the following three industries include tech industry employment: (1) Computer and electronic product manufacturing (NAICS: 334000) and the aerospace product and parts manufacturing (NAICS: 336400) in the durable manufacturing sector, (2) Information sector excluding publishing industries, and (3) Professional, scientific, and technical services sector.

These three categories are not exclusively tech industry positions, however. For instance, law, accounting, and architectural firms (professional, scientific, and technical services)

are not high-tech. It is difficult to distinguish those from the whole category from monthly payroll data released by the California Employment Development Department. This is why we will introduce the second method with more refined categories to analyze the tech industry later on.

Figure 1 shows the total jobs in the three categories we are using to get an idea of tech industry growth since 2002 for the six regions: Los Angeles (County), Silicon Valley (Santa Clara County), San Francisco (San Francisco, San Mateo and Marin Counties), Orange County, San Diego (County), and the East Bay (Alameda and Contra Costa Counties). With the largest economy size (total jobs of 4,494,000), L.A. has the largest tech workforce (446,000) followed by Silicon Valley's 346,000, and San Francisco's 268,000 in July 2018.

From Figure 1, we see that tech employment in all regions has recovered since 2010. Among them, two regions have outstanding growth over the past 8 years: Silicon Valley and San Francisco. In particular for San Francisco, the current tech job level has surpassed the peak (191,000) of

Figure 1 Tech Jobs in 6 California Metros from 2002 to 2018

Source: California Employment Development Department

1. L.A. has a prominent film and broadcasting industry. Therefore, when we calculate the tech jobs, we only assume 20% of employment are in the tech sector.

Figure 2 Monthly Year-over-year Growth Rate of Tech Jobs in 6 California Metros from 2011 to 2018

Sources: California Employment Development Department

the Internet bubble in November 2000. Figure 2 displays the monthly year-over-year growth rate of tech employment for these 6 regions. Tech employment growth rates are higher in the Bay area and San Diego than those in L.A. and Orange County.

A Closer Look at Tech Occupation in 6 California Regions

Now, let's use Occupational Employment Statistics to examine the trend of tech jobs by a more precise method. As shown in Table 1, we suggest part of the positions in Computer and Mathematical Occupations and Architecture and Engineering Occupations belong to the core of the tech industry. Here we assume that the median wages should be at least \$77,000 in L.A. to qualify as a tech job given its definition of high-skill and high-compensation. Table 2 displays 23 positions we suggest as tech jobs, with median wage ranging from \$77,000 to \$135,000.

With a more refined definition of tech, Figure 3 shows the core tech workforce for the six California regions in 2010 and 2017. Consistent with Figure 1, we can see two regions -- San Francisco (99%) and Silicon Valley (44%) -- having the largest growth in jobs. And it is not surprising to see Silicon Valley with the biggest tech workforce (152,000) followed by Los Angeles's 124,000 and San Francisco's 90,000. For most regions, their tech job growth rates are higher than their overall job growth rates.

Figure 4 presents the annual median wage for these core tech positions in 6 regions in 2010 and 2017. We see across-the-board wage growth between 2010 and 2017 from 12% in Silicon Valley to 25% in San Francisco. In 2017, median wages are around \$100,000 in the Southern California regions, lower than Northern California's (East Bay's \$110,000 and \$120,000 plus for San Francisco and Silicon Valley) where the cost of housing is also higher.

The Tech Industry in Los Angeles

Let's go back to the first definition of tech jobs (durable manufacturing, information, and professional, scientific, and technical services) in order to look at the geographic focus within L.A. County. Because we don't have the data for durable manufacturing (only for total manufacturing), we only discuss the current state and the change of the information sector and professional, scientific, and technical services sector. As a whole, the average wage was \$111,800 in the information sector and \$93,000 in the professional, scientific, and technical services sector in 2017.

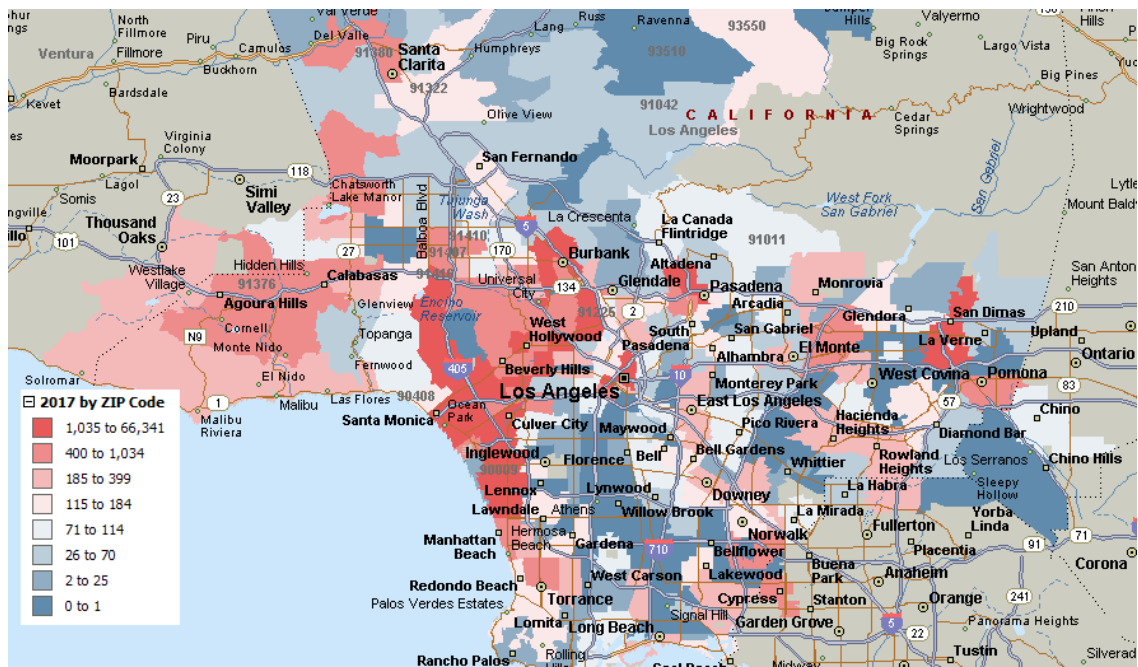

Figure 5 shows the number of employment in the information sector by zip code in L.A. in 2017. Darker red means more employment as opposed to darker blue meaning

less employment. It is clear to see the information sector is clustered in West L.A., Culver City, and through West Hollywood to Burbank.

Figure 6 displays the number of employees in the professional, scientific, and technical sector by zip code in L.A. in 2017. This sector is less concentrated than the information sector and ranges from West L.A., Westlake, South Bay, West Hollywood, Downtown L.A., Burbank, and Monrovia up to Santa Clarita. Table 3 lists the top 10 zip codes for employment in these two sectors in L.A. County in 2017. For the information sector, they are in Burbank, University City, Santa Monica, West L.A. Hollywood, Culver City and Venice. For the professional, scientific, and technical services, they are in Downtown L.A., El Segundo, Century City, West L.A. Warner Center, Santa Monica, etc.

Startups Investments

In addition to the tech industry, the startups activities are another indicator to present the vibrancy of innovation and entrepreneurship of local economies. Table 4 lists the number of financing and total funding amounts for startups or private companies. The funding includes seed/angel, venture capital (Series A to E+), private equity, debt, grant, M&A, and IPO. We also show the number of exits, meaning the successful outcome of the startups by either becoming public company (IPO) or acquired/merged by other companies. The industry includes all kinds of businesses, ranging from health care, internet, consumer products, to software.

We can see that San Francisco (including East Bay) region has the most active startup investments. In 2017, there were 909 funding deals, amount to \$22.2 billion with 12 exits. Silicon Valley comes as second with 643 funding deals totaling \$18.3 billion with 15 exits in 2017. Los Angeles is the third with 307 funding deals totaling \$9 billion with 11 exits. San Diego (\$1.7 billion) and Orange County (\$2 billion) come last with much lower startup funding investments. It is worth noting that startup investments in Los Angeles has been accelerating in recent years, from \$2.75 billion in 2011 to \$9 billion for the first 9 months in 2018.

Forecast

Using the growth rate of tech employment in Figure 2, we forecast the tech job growth over the next year for these 6 California regions: Los Angeles: 2%, San Francisco: 2.2%, Silicon Valley: 2.5%, Orange County: 1%, San Diego: 2.5%, and East Bay: 2%. We suggest that exceptionally high growth in San Francisco and Silicon Valley we saw in the past several years will slow down, partly due to rising cost of housing, and will converge to a normal growth range of 2% similar to Southern California.

Conclusions

The takeaways of the report are as follows:

- By and large, tech industry and jobs remain robust in major California metro areas. They are the main driver of a strong California economy because of their high productivity, high income, and high purchasing power.
- In terms of core tech jobs, Silicon Valley has the largest number: 152,000, followed by L.A.'s 124,000, San Francisco's 90,000, San Diego's 71,000, Orange County's 66,000, and East Bay's 50,000.
- Silicon Beach (the region from West L.A. and West Hollywood to Burbank) enjoyed a higher growth of tech jobs than the surrounding areas, in particular for the information sector with high skills and high wages in the past few years. In recent years, we also see rising startup investments in Silicon Beach due to its vibrant environment for innovation and entrepreneurship.
